

Dear Students,

Thank you so much for your entries to our Christmas Science competition to design a space station. I really enjoyed looking through all of your posters and information sheets. There were some really inventive ideas and interesting ways of providing people with crucial supplies such as food, oxygen and a waste disposal unit.

All of the entries were judged by our year 8 Science ambassadors here at Denefield. Judith and Morgan decided on an overall winner and runners up. They were given a copy of the competition description so that they could compare the entries to this.

The competition winner was Freddie [REDACTED] from Downsway. His picture of a space station was really detailed. He had labelled all of the areas and explained why each part was important. He had thought of everything that humans would need to stay alive and enjoy their visit to the moon. He had also included the reason why some of these things would be important to us. Freddie has received a young scientist experiments kit so he can practice his experiments at home.

The runners up all designed unique space stations that would easily sustain life on another planet. They all included things that I hadn't considered myself such as a transportation system, games room and a water purification tank. The runners up were; [REDACTED] [REDACTED] [REDACTED] (Year 5 long Lane), [REDACTED] [REDACTED] [REDACTED] (Year 6 Long Lane) and Daisy [REDACTED] and Ethan [REDACTED] (Downsway).

I really enjoyed seeing all of your Space stations and I hope you will all take part in our Easter competition. I will be giving the details of this to your teachers soon.

Keep experimenting!

Mrs A Turner.

Science Curriculum Leader, Denefield School.
