

Year 4 with Miss Gale- Summer Term

During the Summer term, in Science, we will learn about electricity and how it is used in everyday life. We will:

- identify everyday electrical appliances
- learn the difference between mains and battery power
- explore and build simple electrical circuits
- find out how to make a circuit work
- understand complete and incomplete circuits
- test materials to see if they conduct electricity
- learn how switches turn circuits on and off

In Design and Technology, we will apply our science learning to design and make our own torches.

We will:

- explore different electrical products
- look at what makes a good torch
- design our own torch
- make a working torch with a circuit and switch
- test and improve our design

In Art we will be developing our art skills in Painting. We will learn to express emotion with colour and brushwork, create bold portraits, and reflect on art through study and feedback.
